Name: FaceConduct

Description: Software for Face Recognition Device. This software app can be used to automatically identify or verify individuals in institutions (or universities, colleges, offices and other places) where the presence or attendance is to be controlled.

Languages/Platforms: Java

Complexity: Intricate parts in our project are following: java face detection library is to be used to recognize specified faces. Every individual's photo will be added to database.

Customer: *Nussipbekov Abay*

Senior Lecturer (Information System Dep., Suleyman Demirel University)
